The film was released worldwide from November 7, 2014 in IMAX and 3D formats as well as 2D, and select other theatres across the United States and some international markets, but not China or Japan as of August 2 on 2D and August 9 in IMAX 3D format. Paramount cited the latter countries' regulations prohibiting the screening of foreign films in 3D format within their territories before domestic releases as the reason why "Interstellar" was not screened in said formats in China and Japan. Paramount opted to release "Interstellar" in said countries on 2D format a week after its release in the United States on October 24.

Directed by Christopher Nolan, with a screenplay written by him and his brother Jonathan Nolan, based on scientific theories by Caltech astrophysicist Kip Thorne and follows a group of explorers who make use of a newly discovered wormhole to surpass the limitations on human space travel and conquer the vast distances involved in an interstellar voyage. The film stars Matthew McConaughey, Anne Hathaway, Jessica Chastain, Michael Caine, Topher Grace, Wes Bentley and Ellen Burstyn. The film features many science-fiction concepts heavily inspired by real-world theories of space travel. For example, the concept of black holes is based on Thorne's theory that wormholes could lead to them; both "Interstellar" and "Contact" also feature wormholes as an explanation for how humans could reach the stars within the time frame required. The film had its world premiere at the 84th annual Academy Awards on February 26, 2014. Filming began in June 2011 in studios at Shepperton Studios near London. It is the first film Nolan has directed in 3D. "Interstellar" is scheduled to be released in IMAX and 3D formats on December 12, 2014. The film was released on DVD and Blu-ray Disc on March 6, 2015 by Paramount Home Media Distribution with an Ultra HD Blu-ray version available in early 2016.
